Professional Summary

Junior AI/ML Engineer with hands on experience building production grade AI systems across Generative AI, NLP, Computer Vision, and Automation. Proven ability to design end-to-end ML pipelines, develop LLM powered agents, and deploy scalable AI solutions that improve operational efficiency, decision making, and user experience. Experience working with cloud platforms, enterprise tools, and real-world datasets.

Technical Skills

- **Programming:** Python, Dart, SQL
- **Machine Learning and AI:** TensorFlow, PyTorch, Scikit-learn, Hugging Face, LangChain, MediaPipe
- **Computer Vision:** OpenCV, YOLOv8, YOLOv9, YOLOv11, PaddleOCR
- **Generative AI and LLMs:** OpenAI, Gemini, LangChain, Multi-Agent Systems
- **Automation and Platforms:** Dialogflow CX/ES, Copilot Studio, Power Automate, n8n, Zapier, UJET
- **Data and Analytics:** Pandas, Matplotlib, Plotly, Power BI
- **Databases and APIs:** SQL, REST APIs, Flask
- **Tools:** Git, Jupyter Notebook, VS Code, Android Studio, PyCharm, Google Conversational Agents

Professional Experience

1) Artificial Intelligence Intern (3 Months)

Telenor Shared Services (TSS)

Islamabad, Pakistan

July 2025 – Sep 2025

- Built Tiara 2.0, a production ready AI powered voicebot that leverages Vertex AI and NLP pipelines with telephony integration, reducing manual service desk (SD Norway) workload significantly.
- Developed an IT Service Desk Assistant in Copilot Studio and integrated it into Microsoft Teams, improving SOP access, issue resolution speed, and conversational AI adoption across Telenor employees.
- Integrated Dialogflow CX with UJET(Telephony) for chat, SMS, and intelligent call routing, enabling AI-driven intent recognition and contextual conversation flows.
- Automated Service Now ticketing and workflows using Microsoft Copilot Studio with AI based process orchestration, streamlining IT operations and enhancing predictive service management.

2) Machine Learning and Deep Learning Intern (4 Months)

Bytewise Limited

Islamabad, Pakistan

Jun 2024 – Sep 2024

- Developed, trained, and rigorously evaluated ML and DL models for classification, prediction and segmentation tasks, achieving high accuracy on real world datasets.
- Applied Python, TensorFlow, Keras, and Scikit-learn to solve complex real world challenges, enhancing model performance and data processing capabilities.
- Utilized Natural Language Processing and Computer Vision techniques to process and analyze diverse data types, expanding project scope and capabilities.

3) Artificial Intelligence Intern (1 Month)

Digital Empowerment Network

Islamabad, Pakistan

May 2024 – June 2024

- Completed an intensive AI internship focused on Machine Learning and Deep Learning, building and evaluating supervised models for classification and prediction tasks using Python, TensorFlow, and Scikit-learn.
- Applied data preprocessing, feature engineering, and neural network techniques on real-world datasets, strengthening the practical ML foundation that later supported production-level AI deployments.

Projects

1) FeedbackFlow: AI-Powered Transport Management System (FYP) — *NLP, Sentiment Analysis, Flutter, MySQL, Rasa, QR Code Systems*

AI-powered university transport system with a Rasa chatbot, NLP sentiment analysis for feedback classification, and QR-based fee verification, achieving 93% chatbot accuracy.

2) Enterprise RAG API with Voice Chat Interface — *FastAPI, OpenAI, Supabase, pgvector, GPT*

Production-ready RAG system using OpenAI embeddings and Supabase pgvector with semantic search over policy documents achieving 90%+ retrieval relevance. Built a voice-enabled chat interface with Web Speech API and deployed scalable FastAPI endpoints on Vercel.

3) EchoSee: Multi-Agent AI Voice Assistant Platform — *LangGraph, LangChain, Whisper, GPT-4o-mini, FAISS*

Multi-agent AI assistant with 8 specialized agents for intelligent reasoning, RAG, memory, and tool orchestration, featuring real-time voice pipeline (STT → LLM → TTS) with sub-5s latency. Integrated FAISS-based document Q&A, persistent memory, sound event detection, lip-reading, and an interactive Streamlit dashboard.

4) AI-Powered Driver Safety Monitoring System — *Python, OpenCV, MediaPipe*

Real-time drowsiness and phone-use detection system using MediaPipe facial landmarks, achieving 95% accuracy at 16+ FPS with under 5% false positives.

5) JobAlign AI: Multi-Agent Job Search and Resume Matching System — *LangChain, LLMs*

Multi-agent AI system that analyzes resumes, matches candidates to real job listings via semantic similarity, and generates ATS analysis with skills gap insights.

6) AI Data Analyst Agent — *Python, OpenAI, Plotly, Streamlit*

GPT-4o-powered data analyst that answers plain-English questions on CSV files and generates interactive visualizations, reducing analysis time by 98%.

7) Real Time Basketball Tracking and Analytics System — *Python, YOLOv8/11, OpenCV, PyTorch*

Computer vision pipeline using YOLOv11, IoU tracking, and Kalman filtering for real-time basketball analytics at 15–25 FPS with player heatmaps and CSV exports.

8) AI Powered Fiverr SEO Optimizer — *n8n, LLMs, Firecrawl, SEO Automation*

Automated SEO agent that extracts Fiverr gig data via Firecrawl, processes it through LLMs to generate optimized content, and validates improvements via before/after comparison.

9) AI Outreach Automator - SMART INTERNSHIP SEEKER — *Zapier, LLMs, Firecrawl, Gmail*

AI-powered outreach automation that extracts company insights, analyzes websites, and generates personalized internship emails, saving drafts automatically in Gmail using Zapier workflows.

Education

BS Artificial Intelligence

National University of Modern Languages (NUML)

Islamabad, Pakistan

Feb 2022 – Jan 2026

- CGPA: 3.2

Certifications

- Generative AI: Working with LLMs
- RAG (Retrieval Augmented Generation): LLMs with Vector Search
- Power BI: Dashboards for Intermediates
- Power Automate: Fundamentals and Solutions (Telenor Academy)
